This Newest Strain is 80% LETHAL

University of Boston researchers with the National Emerging Infectious Diseases Laboratories have created a new, virulent, and absolutely lethal strain of COVID-19.

Many are criticizing the move as echoing the experiments at the Wuhan Institute of Virology according to the [Daily Mail](#). The same experiments likely led to the global pandemic, paving the way for the [devastating lockdown](#) and shutdown of the global economy.

The new variant crafted by the University of Boston team is a hybrid of the COVID-19 '[Omicron](#)' variant that spread through the winter of 2021 and was noted for its massive infectivity but relatively lower mortality rate than the original or 'Alpha' variant.

According to [Post Millennial](#), the hybrid virus has been tested on laboratory mice and has shown an 80 percent mortality rate. The control group for the experiment a group of mice infected with the 'Omicron' variant all survived and experienced "mild" symptoms.

The reports indicate that the researchers stripped the spike protein from Omicron, the portion of the virus that allows it to bond to human cells, and affixed it to the original 'Alpha' variant that initially arose in [Wuhan](#). The results were devastating.

Researchers wrote, "In...mice, while Omicron causes mild, non-fatal infection, the Omicron S-carrying virus inflicts severe disease with a mortality rate of 80 percent."

Professor Shmuel Shapira, a leading scientist in the Israeli Government, told The Daily Mail, “This should be totally forbidden, it’s playing with fire.”

Dr. Richard Ebright, a chemist at Rutgers University in New Brunswick, New Jersey, told the DailyMail,

“The research is a clear example of gain of function research,” adding, “If we are to avoid a next lab-generated pandemic, it is imperative that oversight of enhanced potential pandemic pathogen research be strengthened.”

This is the very same “gain of function” research that Sen. Rand Paul of Kentucky berated NIH Director Dr. Anthony Fauci about during the 2021 Senate hearings.

But this isn’t happening in Wuhan or Vietnam or Bangkok... it’s happening in Boston. Reportedly the Boston facility is one of 13 biosafety level 4 labs in the United States.

Prof David Livermore, a professor of microbiology at the UK’s University of East Anglia echoed his colleague’s sentiments to the DailyMail. He added, “given the strong likelihood that the Covid pandemic originated from the escape of a lab-manipulated coronavirus in Wuhan, these experiments seem profoundly unwise.”
