

- A small batch of documents released by the U.S. Food and Drug Administration in mid-November 2021 revealed that in the first three months of the COVID jab rollout, Pfizer received 42,086 adverse event reports that included 1,223 deaths

There are now 1.9 million adverse events from the shots recorded in the CDC's Vaccine Adverse Events Reporting System (VAERS) since the Emergency Use Authorization was approved by the FDA.

Another 21,745 Americans died from the shots,

Another 115,000 Americans have been hospitalized with serious vaccine injuries from these shots. Yet according to the media, every single one of those people is invisible.

*VAERS data released Friday by the Centers for Disease Control and Prevention included a total of 1,226,314 reports of adverse events from all age groups following COVID vaccines, including 26,976 deaths and 219,865 serious injuries between Dec. 14, 2020, and April 8, 2022.*

Excluding “[foreign reports](#)” to VAERS, [805,921 adverse events](#), including [12,471 deaths](#) and [79,811 serious injuries](#), were reported in the U.S. between Dec. 14, 2020, and April 8, 2022.

Every Friday, [VAERS](#) publishes vaccine injury reports received as of a specified date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed.

Historically, VAERS has been shown to report only [1% of actual vaccine adverse events](#).

**U.S. VAERS data from Dec. 14, 2020, to April 8, 2022, for 5- to 11-year-olds show:**

- [10,216 adverse events](#), including [242 rated as serious](#) and [5 reported deaths](#).

- **18 reports** of myocarditis and pericarditis (heart inflammation). The CDC uses a **narrowed case definition** of “myocarditis,” which **excludes cases** of cardiac arrest, **ischemic strokes** and deaths due to heart problems that occur before one has the chance to go to the emergency department.
- **39 reports** of blood clotting disorders.

**U.S. VAERS data from Dec. 14, 2020, to April 8, 2022, for 12- to 17-year-olds show:**

- **31,048 adverse events**, including **1,792 rated as serious** and **44 reported deaths**.
- **67 reports** of anaphylaxis among 12- to 17-year-olds where the reaction was life-threatening, required treatment or resulted in death – with 96% of cases attributed to **Pfizer’s vaccine**.
- **651 reports** of myocarditis and pericarditis, with **639 cases** attributed to Pfizer’s vaccine.
- **166 reports** of blood clotting disorders, with all cases attributed to Pfizer.
